Why you should block a basement with Newtonbrook Block products

The Ontario Concrete Block Association's QP2000 program continues to impress builders, contractors and architects alike. As of January 2006, the OCBA has evolved into a Canada-wide body with national membership, called the CCMPA—the Canadian Concrete Masonry Producers Association..

We at Newtonbrook Block are proud to provide our customers a complete line of concrete products which are CCMPA certified and exceed the CSA standards codes. As a CCMPA member we fully comply with and are members of the Region 6 of the NCMA—the National Concrete Masonry Association.

The question of why someone should use concrete blocks for their basement material has been asked many times. Let's look at some the advantages of block basements.

Pre-cured Product:

- Your block arrives on-site at full strength
- Faster drying-out means faster finishing

Straight, True, Level Walls:

- Easier to finish, and apply insulation
- Easier to continue above grade construction

Adaptability:

- Easier to fit difficult lots—Especially step-footings

Finished Walls:

- Acceptable without additional finish
- Various finishes possible as upgrading

Versatility:

- Last minute changes - even during construction
- Changes and increases in basement height achievable

QUALITY ASSURANCE

- Newtonbrook Block is one of the only block producers that has its own Quality Assurance Laboratory
- All testing complies with CSA and ASTM Standards
- All Newtonbrook Block concrete products are CCMPA compliant
- Product testing results are available upon request

NEWTONBROOK BLOCK BASEMENTS: More reasons why.

In most cases in Ontario, homes are built with a basement. It is the base on which the home will rest. It only makes sense to build your home on the best foundation possible. We at Newtonbrook believe that concrete block is the very best you can give your customers.
